

# ASSIGNMENT-5

## 20bcsa09\_Pratyusha Priyadarshini

Q1. Create a Virtual Network (VN) inside the MS Azure & deploy 2 different VM inside the same VN, create a load balancer (LB) in that VN now connect it with your CLI & install the Apache2 webserver on these two VM, place an HTML text file(write some text in it) on that Apache server, now configure your Load Balancer (LB) & try to distribute the traffic among the two different VMs.

## Configure high availability and scalability for your applications

Create highly-available and scalable applications in minutes by using built-in load balancing for cloud services and virtual machines. Azure Load Balancer supports TCP/UDP-based protocols and protocols used for real-time voice and video
